Solutions Architect

Description

In the last 10 years, Mambu has been revolutionizing banking – making it more accessible, more straightforward, and more inclusive for everyone. With fresh funding secured and a near €5 billion valuation, Mambu has huge ambitions for itself and the whole banking sector.

Mambu brings this same sense of innovation and aspiration to how they support their people. The company pioneered the 4-day summer work week, announced the provision of equity for all, and launched Our Mambu Deal to capture how they work with each other and what they offer all Mambuvians.

Responsibilities

- Acting as a trusted advisor to our prospects as well as newly-joined customers, helping them to understand how API-driven architectures, Cloud Computing and Mambu will help them to build or transform their business into an innovative, digital organization.
- Supporting our presales and delivery teams by architecting, engineering and demonstrating solutions.
- Engaging with all levels of customer representatives, from engineers to technology leaders and managing executives.
- Make sure all their concerns are satisfied and risks are taken away. The key takeaways from the meetings with you should be trusted in approach, organisation and the technology that you advocate for.
- Work closely with Mambu's Ecosystem & Product Engineering Teams team to make sure the end-solution proposed to the customer is providing a unique competitive advantage, and fulfils all the regional and market needs.

Qualifications

- 7+ years of experience with API-driven architectures.
- Hands on and mocking up solutions by applying your coding skills to help customers deliver unique propositions to market.
- Aware of traditional enterprise architectures in financial institutions and thrive on putting forward a compelling case to think differently.
- Know the role of different components in Integration Architecture – such as ESB, BPM and Rules Engine, as well as API Management.
- Very good understanding of cloud-native architectures, service orientated, and event-driven architectures and their security considerations.
- Engaged directly with customers and prospects and know how to deal with critical situations in front of clients.
- You can reason about container-based architectures and Docker.
- Know the value and the tradeoffs of building microservices architecture.
- Understand how Federated Authentication works and know what SAML and OAuth is.
- Bachelor's degree in relevant field.

Hiring organization

Mambu

Mambu is the only true SaaS cloud core banking platform. Our unique and sustainable composable approach means that independent engines, systems and connectors can be assembled in any configuration to meet business requirements and the ever-changing demands of your customers. Over 280 banks, lenders, fintechs, and even retailers in 65 countries turn to us to help them build modern digital financial products faster, securely and cost-effectively.
